

About Us

Monoatom Labs is brain child of Sushanth Paatnaik, 6 times President of India Awardee. His innovation journey started at age of 11. Aayush Bansal is an astout businessman from Maharashtra with steel manufacturing and clothing business over 38 years. Sushanth Paatnaik Develops Graphene Innovations, Aayush is instrumental in deploying Innovations in the Industry. Monoatom Labs team has scientists from reputed institute like IISC, IIT and National Chemical Laboratory as research and development partners.

At Monoatom Labs we challenge the normal, set performance benchmarks for materials and achieve them using graphene based solutions. We develop lab scale Innovations, test and validate results and then setup commercial scale manufacturing of such solutions to make them commercially viable to use in industry. Our solutions have applications in Aerospace, Defence, Clean energy storage, Solar Panel efficiency improvement, Construction Industry, Tyre Industry, Chemical and Water filtration, Specialized Engineering components, High performance clothing and polymers.

Applications !

- Utility-scale solar power plants
- Rooftop residential solar installations
- Commercial & industrial solar rooftops
- Floating solar plants
- Solar farms in high-dust & temp zones
- Retrofitting of existing solar panels

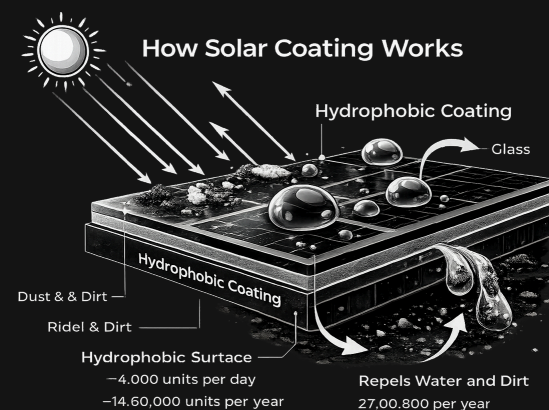

Why Choose Us?

- Developed using cutting-edge graphene nanotechnology
- Proven lab & field-tested performance
- Compatible with all major crystalline & thin-film solar panels
- Non-invasive, easy spray or wipe application
- Suitable for new installations & retrofit projects

How It Works ?

Graffisol utilises ultra-fine graphene nano structures uniformly dispersed within a transparent coating matrix. These enable:

- Anti-reflective behaviour by reducing surface light losses & increasing photon absorption
- Enhanced thermal dissipation, lowering panel operating temp
- Hydrophobic and dust-repellent surface, minimizing soiling losses

Cost Benefit Analysis

- For 1 MW Plant, Coating required: 50 L (₹2,500/L)
- Total coating : ₹1.25 L + labour
- Annual generation: 14.6 lakh units
- Efficiency gain: 8-9%
- Extra energy: 1.17 lakh units/year
- Power tariff (assumed): ₹6/unit
- Annual benefit: ₹7.0 lakh
- 3-year benefit: ₹21.0 lakh

Why our Product is Superior ?

- Delivers efficiency enhancement without electrical modification
- Combines efficiency gain, thermal management, and surface protection
- Lower cost per watt gained compared to mechanical or electrical upgrades
- Improves ROI & reduces LCOE
